SUGGESTED BROILER FEEDING PROGRAM

1. The amount of feed required for a finished meat-type bird is influenced by breed types. Breeds which have been raised for meat only (broilers) will require from 8 to 10 lbs of this feed to produce 4 to 4.5lbs of body weight in about 8 weeks.
2. Rhode Island Reds and Plymouth Rock Males raised for meat purpose may require 12 to 15 lbs of this feed to produce 4 to 4.5lbs of body weight in about 14 weeks.
3. Breeds which have been raised for egg production only may require 14 to 17 lbs of this feed for the males to reach 4 lbs in 18 weeks of age. White Leghorn will reach 3 lbs in about 20 weeks.

IMPORTANT

- * Keep fresh feed and water available.
- * Do not overfeed or underfeed.
- * Feed troughs can be filled full during the first day or two of the chick's life so the chick can see and learn where the feed is. From there on, feeders should be filled from 1/2 to 2/3 full.
- * Provide heat lamps during the first three weeks of age (maintain 98 degrees F).
