Feeding Directions

Hay pellets are a good feeding option for older horses, horses with bad teeth who have trouble chewing, or horses who are sensitive to breathing in dust from long-stem hay. It is recommended that hay pellets should not exceed more than 50% of the horse's total forage portion of the diet. The minimum forage intake for most adult horses is 1.5—2.0% of their total body weight per day. Make all feeding changes gradually.

Provide clean, fresh drinking water at all times. Store in a cool, dry, ventilated location away from rodents and insects. Do not feed if moldy, spoiled, insect/rodent infested, or if feed has an uncharacteristic odor or appearance, as it may cause illness or death.

WARNING! - Do not feed to sheep. This feed contains added copper at levels that may be toxic if consumed by sheep.
