Magnesium	0.5%	Pro-Tect	Yes
Lysine	0.2%	Yucca schidigera.....	Yes
Methionine	0.2%	Herbal Formula	Yes

PREMIUM HAY

Ingredients:

Dehydrated chopped timothy and other hays.

Perfect for those needing a chopped, bagged forage without oils or molasses.

Lucerne Farms forage is a grain complement, fiber supplement, and hay replacement. Each of our blends contain a special mixture of Northern grown forage to help meet the needs of horses at every level and every stage of life.

APPLYING LUCERNE FARMS TO YOUR FEEDING PROGRAM

GRAIN COMPLEMENT

Mixing Lucerne Farms forage at a 3/1 ratio with grain can help increase digestibility and performance of grain and supplements, making sure your horse's digestive process gets off to a running start.

HAY REPLACEMENT

Sometimes alternatives for traditional hay are needed. Feeding Lucerne Farms at 1.5-2% of your horses body weight can ensure they are meeting their daily forage requirements.

FIBER SUPPLEMENT

Adding 4-6 lbs. of Lucerne Farms forage to your feeding program can help ensure your horse is getting the proper amount of fiber in a form that is more beneficial to their physical and mental health.

Lucerne Farms, a family farm in pristine Northern Maine, was founded in 1992 by Dr. George A. James. After his death in 2005, his son Richard James took over his father's passion for producing the highest quality chopped, bagged forage in the market. Lucerne Farms takes pride in running every aspect of the farming and production of their bagged forage, from the planting of the seed to the bagging of the forage.

102 Conant Rd. Suite 2
Easton, ME 04740

Lucerne Farms has been blazing the trail in the compressed bagged forage industry for two generations. Often imitated but never duplicated, Lucerne Farms provides the highest quality forage for your beloved animal.

OUR PROCESS

- High-Temperature dried to maximize nutrients lost in the "sun-curing" process.
- Processed naturally to eliminate mold spores without the use of chemicals.
- Blended with soy oil and molasses to eliminate dust.
- Chopped to a natural fiber length.
- Compressed into a bale for easy storage and handling

HOW TO FEED OUR FORAGE

This feed can be fed in a bucket, in a corner feeder mixed with the daily grain ration or fed outside in a feed tub.

However you choose to feed, remember to calculate your feed by weight not volume.

A 5 gallon water bucket packed full with our forage weighs approximately 5 pounds.

*Always make changes to the diet gradually over a period of 7 to 10 days.
